## OPERATING TIPS AND TROUBLESHOOTING HINTS

- To operate each device (VCR, TV, Cable Box, DVD Player, or Satellite Receiver), you must first program the remote control; then press the proper mode key (VCR, TV, CABLE, DVD, SAT, or AUX) to select an operating mode. The VCR, TV, and DVD modes are preprogrammed with Sanyo codes.
- Some manufacturers use many different codes. If your brand of equipment has more than one code listed, try programming your remote with the different available codes until you locate the correct one for your device.
- There may be VCRs, TVs, DVDs, Cable Converter Boxes, and Satellite Receivers that this remote control cannot operate. Some models may operate only partially.
- Codes will remain in memory for five minutes as you
- Remove batteries from the remote control if it will not be used for a month or more. Weak batteries may leak and damage the remote control.
- This remote control uses an invisible (infrared) beam of light to operate the equipment. Objects between the equipment and the remote control can block the beam of light. Therefore, the remote control must be pointed directly at the equipment you want to operate.
- This remote control cannot add keys or features to your equipment. Your equipment's manufacturer must have originally provided them.
- When switching from the VCR or DVD mode to the TV mode, the VCR/DVD specific control keys will continue to operate the last device (mode) selected. For example, when switching from DVD to TV mode, the VCR/DVD control keys will continue to function as DVD keys.
- Replace the batteries if the remote control fails to operate any of your equipment. Be sure to install batteries
- Many of the remote control keys are multi-functional. Refer to the chart on the inside of the carton for a brief description of the keys and their functions. Refer to your original operating manuals for specific feature operation.
